

Loudoun CPS - Child Suggestibility

The below video is an actual excerpt from a trial in which an expert witness explained to a jury the Mousetrap experiment. Essentially, the study proves that children will change their statements when repeated constantly concerning the same subject. In this case, the question was did you ever get your hand caught in Mouse Trap, conducted by Dr. Stephen Ceci and Dr. Maggie Bruck. I will add the Sandra Glenney is significantly opposed to any of Ceci's and Bruck's research.

Your attorney needs to know all of the various studies concerning child suggestibility, I can assure you Loudoun CPS does not know any of the research concerning Children Suggestibility, neither does Sandra Glenney.
